Therapy perspective on dysphagia and its management**

**Linda Blackie**, Specialist Speech & Language Therapist, NHS Lothian  
**Marjory Macleod**, Specialist Learning Disabilities Dietitian, NHS Lothian

**Through thick and thin: flow properties and textures of products  
for dysphagia management**

**Dr Ben Hanson**, Senior Lecturer in Mechanical Engineering,  
University College London

This symposium aims to provide expert opinion and practical advice and guidance in relation to nutrition and hydration management in patients suffering from dysphagia.

The programme will include an understanding of the condition across the disease spectrum and how this can affect nutrition and hydration status in dysphagic patients.

Through practical guidance, expert demonstrations and delegate interaction the programme also aims to increase knowledge of 'food first', skills and understanding in the production of modified food and fluid to provide appetising, dignified and nutritious food and fluid options for patients.

**Visit the Fresenius Kabi stand between 12.30–13.30** where following on from the symposium our experts will demonstrate the preparation of appetising and dignified texture modified food and fluid including highly important snack options which help meet patient food preferences and in turn aid optimal nutritional intake in this patient group.

Sponsored by Fresenius Kabi Ltd
